

FLUOROCERAM[®]

Ultraviolence.

How Whittaker Fluoroceram fights back against the sun.

The sun can ruin a beautiful building.

That's why Whittaker brings you Fluoroceram metal coatings.

Proven technology.

Fluoroceram is based on a new fluoropolymer technology incorporating the Kynar-500[®] resin. So you get a coating with the durability to stand up to ultraviolet radiation without fading or chalking, the integrity to resist moisture, and a spectrum of colors for cost-effective spray or coil application.

With Fluoroceram, a beautiful building stays looking beautiful. For decades.

Whittaker, of course.

There is only one complete line of premium coatings for architectural metals. And it's from the only name you need to know in coatings.

Whittaker.
Of course.

Expect more from us.
